SPECIFICATIONS AND USAGE EXAMPLES

As standard, all screens supplied with two pairs of stabilising L-shaped feet and two flat plates.

L-shape feet are used to make the screen freestanding. Optionally, flat plates can replace the L-shape feet on one side so that the screen can be positioned right up to the edge of a surface: this may be desireable on a reception desk. Where the flat plates are used in this way the screen must be fixed to the supporting surface with screws (provided).

Fully freestanding screens may also be screw fixed if desired.

ON RECEPTIONS

1060mm high screens may be used on desks/reception desk to create a barrier against standing people 1795mm high (desk 735mm + screen 1060mm). This will match in height 660mm screens placed on X-Range deskovers (desk 735mm + deskover 400mm + screen 660mm).
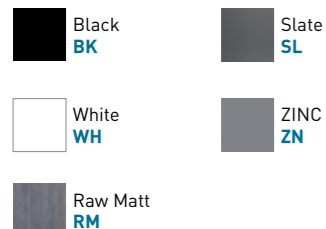

Package pass-though cut-outs provide a gap 300mm wide x 120mm high in the centre of the base of the screen, through which packages may be passed.

ON BENCH DESKS AND MEETING TABLES

660mm high screens may be used as transverse screens on bench desks (i.e. between users seated side by side) and along the centre of meeting tables.
